

# HEALTHCARE IT PROFESSIONALS TACKLING TODAY'S CHALLENGES

HEALTHCARE

**Healthcare IT professionals must quickly decide how to tackle today's challenges** of keeping up with rapidly changing IT innovations, overcoming shortfalls in legacy systems and data centers, managing an ever-growing amount of patient data, and ensuring interoperability of a myriad of IT systems. Pair these needs with requirements to reduce TCO and provide for business continuity and disaster recovery, and the requirements upon the IT team are compounded. *So what can help?*

## COLOCATE IN A **CLOUD-ENABLED DATA CENTER**

CoreSite data centers sit at the intersection of telecommunications, cloud providers and the healthcare industry. Our cloud-enabled data center solutions provide healthcare organizations with the bandwidth to support their data management needs now and in the future.

The presence of over 375 network service providers and over 300 cloud and IT service providers across CoreSite's data

center portfolio enables instant access to data and workload support - whenever and wherever it is needed. CoreSite network engineers can help you design a high-performance solution leveraging cloud and network partners to help manage your workloads and move your data with greater speed and resiliency, and at a lower cost.

Colocating in CoreSite's data centers offers healthcare IT professionals scalable

solutions ranging from cabinets and cages to fully customized computer rooms. These options allow organizations to safely and reliably execute upon their IT requirements using a deployment that best fits their needs, whether primary or redundant, server- or cloud-based, or in a hybrid solution. This scalability provides a perpetual match for the needs of your healthcare organization.

# MANAGE YOUR WORKLOADS AND SECURE YOUR CRITICAL PATIENT DATA IN AN EFFICIENT, RELIABLE ENVIRONMENT

## HEALTHCARE

**Secure, reliable access to vital computing infrastructure and data when you need it** is critical to your ability to provide high-quality patient care. CoreSite recognizes the importance of meeting this demand. We have built our reputation upon security, performance, rock-solid reliability, and the commitment to provide an exceptional customer experience to organizations including patient care providers, healthcare integrators and insurance companies.

### Regulatory compliance

CoreSite understands your HIPAA compliance needs. Our experienced team can help support you and contribute to your compliance documentation, including providing you with a Business Associate Agreement (BAA).

### Security

CoreSite's 24x7x365 on-site security personnel are employed in-house, rather than outsourced. Our security staff undergoes rigorous training and testing each year, and CoreSite retains outside consultants to verify our compliance with security standards such as HIPAA, ISO 27001, PCI DSS, SOC 1 Type 2 and SOC 2 Type 2.

### Reliability

Reliability in a data center is non-negotiable. CoreSite is built on robust systems and the advanced skills and knowledge of our experienced in-house facilities team. We back up our commitment to reliability with our 100% uptime SLA, providing you confidence in knowing that your most important resources and information will be available when you need them.

### Support

CoreSite's team of over 400 experienced professionals provides you with the support you need from beginning to end. We can help you design a data center solution tailored to fit your needs, provide flexible contracting terms to mirror the dynamic requirements you manage, support migration requirements, directly or through our trusted partners for both

your physical technology infrastructure and your workloads, and give you real-time visibility into your CoreSite operating environment via our robust on-line customer portal.

### An ecosystem for interoperability

From inside CoreSite data centers, you can tackle IT processes such as archiving, recovery-as-a-service and data analytics by taking advantage of solutions from some of the most innovative cloud and managed service providers in the world. In fact, you might find some of your key business partners are already located in our data center communities, enabling you to seamlessly access computing infrastructure and move data with lower cost among the partners that mean the most to you.
