

The Open Cloud Exchange®

Your “Easy Button” for Enterprise-Class Network Connectivity

Interconnection has become a top priority for IT and business leaders. Why? Because the right connectivity choices can result in better performance, reduced expenses and successfully achieving your operational objectives.

CoreSite’s Open Cloud Exchange® (OCX) delivers enterprise-class connectivity and automation that simplify how businesses interconnect with cloud providers, network service providers, MSPs, systems integrators and digital ecosystem partners. By virtualizing and automating complex network functions, organizations can streamline business transactions, transfer data and expand into new markets while gaining efficiency and reducing operating costs.

OCX brings together a broad set of services that bridge hybrid cloud, multi-cloud and distributed IT environments.

SOLVE YOUR INTERCONNECTION CHALLENGES

SIMPLIFY THE COMPLEXITY OF CONNECTIVITY

Turning up services and moving cloud traffic can be slow and expensive. OCX delivers automated, software-defined interconnection to cloud providers, ecosystem partners and CoreSite facilities - reducing deployment timelines from months to days.

CLOSE THE SKILLS GAP THROUGH AUTOMATION

In-house network expertise can be hard to acquire and expensive. Through our service delivery platform (mycoresite.com), easily automate network-to-network connectivity to clouds, enterprises and service providers - without advanced networking skills.

CONTROL COSTS BY OPTIMIZING RESOURCES

With the OCX, you don’t need to invest in networking equipment or skilled experts, which often comes with a hefty price tag. Plus, our monthly pricing is free of ETLs (early term liabilities) and long-term contracts.

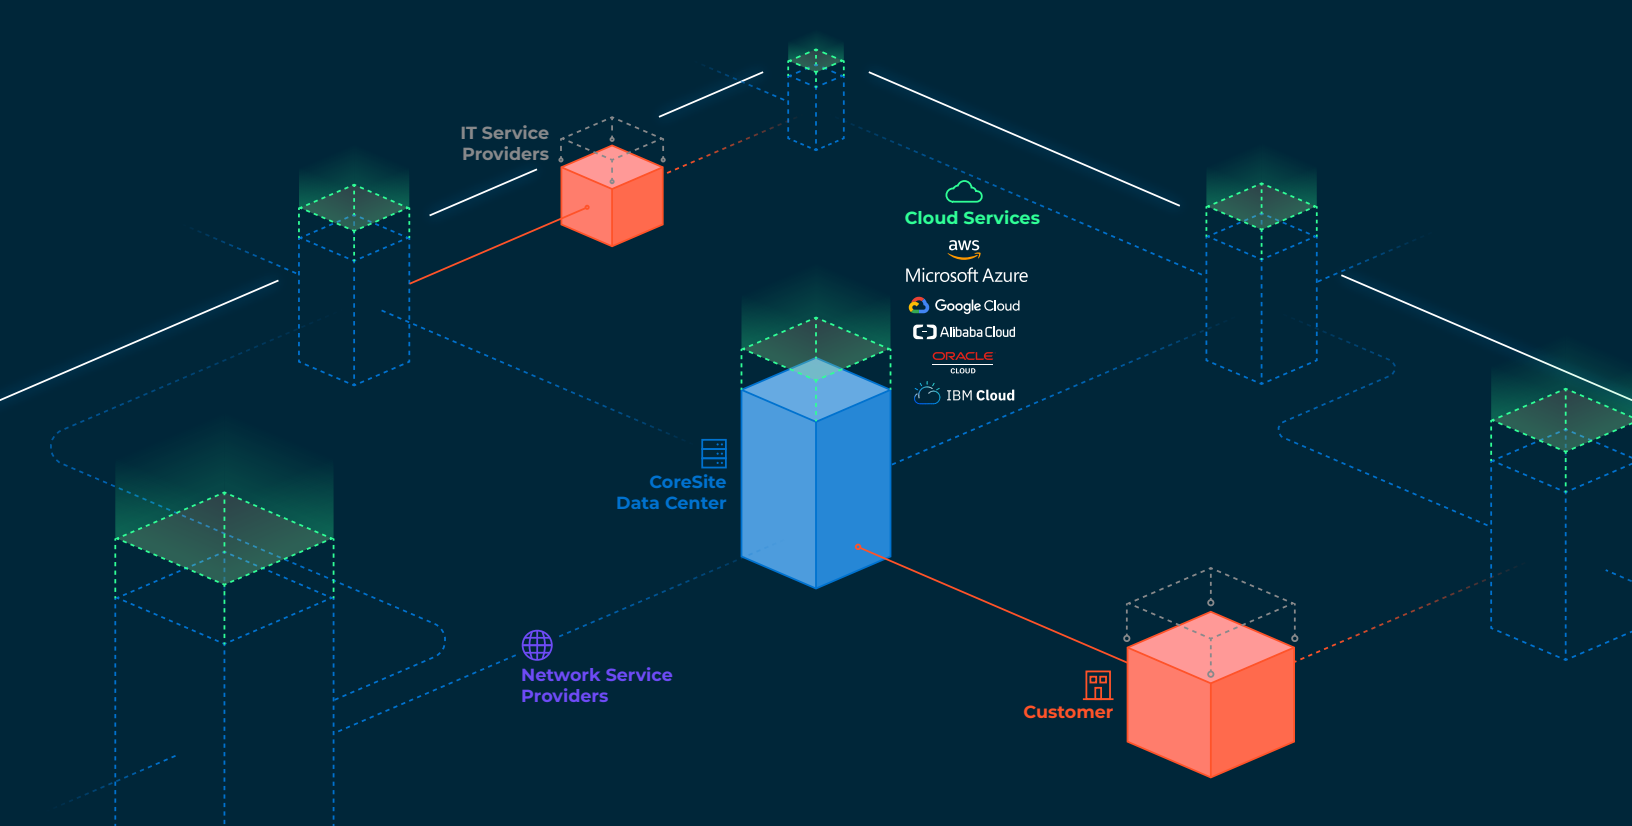

BENEFITS

- ✔ **Securely interconnect private infrastructure with public cloud resources**
The OCX platform streamlines establishing and managing one-to-many cloud connections over a private network while creating secure access to the cloud services you need to differentiate your business.
- ✔ **Lower costs and increase scalability**
The OCX simplifies personalizing customer interactions and drastically reduces data egress fees. OCX inter-market connectivity accelerates delivering new products and services in the U.S. and globally.
- ✔ **Advance IT modernization**
With OCX, you can focus on your core business, not managing your hybrid IT infrastructure. Orchestrate all your connections to cloud service providers (CSPs), network service providers, services and workloads through a single pane of glass.

THE OCX ENABLES ON-SITE CLOUD ON-RAMPS

With the OCX, organizations can create secure and reliable connections to cloud service providers such as AWS, Microsoft Azure, Google Cloud and Oracle Cloud.

HOW THE OCX WORKS

The OCX is a software-defined networking platform designed to take the complexity out of hybrid cloud interconnection. Order a port, virtual router or ethernet virtual connection in minutes with provisioning in real time through a private, easy-to-use service delivery platform. Move data directly between clouds using OCX virtual routing capabilities.

ENHANCED NETWORK SERVICES

Since launching the Open Cloud Exchange in 2013 – the first platform of its kind – CoreSite has continually looked for ways to enhance functionality and help companies modernize networks as they deploy more complex architectures.

CLOUD CONNECT PEERING

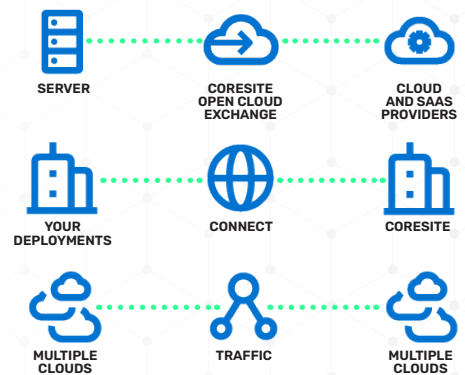

Establish fully managed direct connections to cloud service providers and SaaS providers across Layer 2 and Layer 3 on the OCX.

CONNECT TO MULTI-SITE DEPLOYMENTS OR TO OTHER PARTICIPANTS

Create connections to your other CoreSite deployments or to other OCX participants across different markets.

CLOUD-TO-CLOUD COMMUNICATION

Facilitate traffic directly between multiple clouds utilizing the OCX virtual routing functionality.
